

Andrey Pautov

CTI-to-detection practitioner. Threat Intelligence Research Engineer. AI security tooling builder.

Tel Aviv, Israel · +972 54-255-3383 · Email · 1200km.com · linkedin.com/in/andrey-pautov · github.com/anpa1200 · medium.com/@1200km

PROFESSIONAL SUMMARY

CTI-to-detection engineer with 9 years operating on the offensive side — 7 in special reconnaissance, 2 leading red-team operations against national law-enforcement infrastructure. I build detections from adversary behavior I've executed myself, not just read about. Currently mapping Iran-nexus and cloud-native threat actor TTPs to enterprise telemetry at XPLG.

Maintains AdversaryGraph, a self-hosted CTI-to-detection platform, and a public research archive covering CTI tradecraft, detection engineering, and malware analysis at 1200km.com. Three open-source tools (AIDebug, AuditAI, String-Analyzer) are queued for the Kali Linux 2026.2 distribution; 8 additional contributions have been accepted upstream across MISP Galaxy and other security projects.

PROFESSIONAL EXPERIENCE

Threat Intelligence Research Engineer

May 2025 – Present

XPLG — Enterprise Security Data Platform · Tel Aviv, Israel

- Maps adversary TTPs (Iran-nexus campaigns, hacktivist clusters, cloud-native threats) to XPLG platform telemetry fields; ships log-based detection use cases covering endpoint, network, cloud audit log, and IOC-enrichment sources.
- Translates CTI assessments into Sigma/YARA-compatible detection content, hunting hypotheses, and ATT&CK coverage logic; raises platform technique coverage for priority threat actors.
- Builds and documents CTI enrichment workflows covering parser field mapping, anomaly detection logic, and structured threat reporting pipelines used by security operations teams.

Head of Red Team — Cyber Defence Unit

Jul 2023 – May 2025

Israel Police, Cyber Defence Unit · Jerusalem, On-site

- Directed red-team engagements against national law-enforcement infrastructure: reconnaissance, vulnerability chaining, privilege escalation, lateral movement, and attack-path validation in sensitive operational environments.
- Converted offensive findings into structured defensive intelligence: detection hypotheses mapped to observed attacker behavior, telemetry coverage gap analysis, hardening recommendations, and incident response runbooks converted into deployed detections.
- Produced adversary behavior research and hands-on lab environments used by blue team and SOC personnel for detection development and threat hunting training.

Operator — Special Reconnaissance and AntiTerror Unit

2016 – 2023

Israel Ministry of Public Security · Israel

- Served 7 years as operator and fighter-paramedic in a special reconnaissance unit conducting field operations in high-threat environments.
- Developed deep understanding of adversary tactics, operational security, and mission planning under real-world conditions — experience that directly shapes current threat actor profiling and red-team methodology.

Independent Cybersecurity Researcher & Technical Author

Oct 2024 – Present

Self-employed · Israel, Remote · concurrent with full-time roles above

- Publishes CTI research and detection-engineering field guides at 1200km.com, including evidence-labeled threat actor profiles, infrastructure-pivoting methodology, and ATT&CK-mapped detection tradecraft.
- Built and ships AdversaryGraph, a self-hosted CTI-to-detection platform, plus AIDebug, AuditAI, and String-Analyzer — three tools accepted into the Kali Linux 2026.2 distribution, with 8 additional contributions accepted upstream across MISP Galaxy and other open-source security projects.

SKILLS

CTI Tradecraft

ATT&CK Navigator · passive DNS · OSINT pivoting · IOC relationship graphs · Tier 1/2/3 pivots · confidence tiering · PIR/SIR frameworks · kill chain reconstruction · attribution methodology · crt.sh · MITRE D3FEND

Detection Engineering

Sigma · YARA · YARA-L · hunting hypothesis development · telemetry field mapping · ATT&CK coverage analysis · detection backlog construction · log/PCAP use case design · SIEM / XDR rule logic

Malware Analysis

Capstone · FLIRT · Frida · INetSim · LIEF · static PE/ELF analysis · APK analysis · CFG extraction · behavioral pattern detection · import table triage

Cloud Security

AWS CloudTrail · GCP Audit Log · Kubernetes threat modeling · ECS Fargate · Cloud Run · Terraform · attack simulation · container attack paths

Offensive Security

Deep knowledge — red-team operations · reconnaissance · vulnerability chaining · privilege escalation · lateral movement · adversary simulation · attack-path validation

CTI Platforms & Tooling

OpenCTI · STIX 2.1 · TAXII · MISP · connector engineering · VirusTotal · OTX · ThreatFox · Malpedia · urlscan · GreyNoise · AbuseIPDB · Shodan · Censys · NVD API · CISA KEV · EPSS · Python · Bash · C/C++ · PowerShell · Linux · Docker

OPEN-SOURCE TOOLING & VALIDATION

- **AdversaryGraph** — self-hosted CTI-to-detection workbench. IOC investigation → Tier 1/2/3 relationship expansion → ATT&CK/ATLAS mapping → detection candidate → SIEM validation, in one loop. [GitHub](#) · [Docs](#) · [Use-case article](#)
- OpenCTI symmetric sync, MISP/STIX/TAXII import/export, nine enrichment sources (VirusTotal, OTX, ThreatFox, Malpedia, urlscan, GreyNoise, AbuseIPDB, Shodan, Censys), enterprise RBAC and MFA, and a CVE Library with NVD/CISA KEV correlation.
- **AIDebug, AuditAI, String-Analyzer** — analyst tooling for malware static triage, function-level disassembly explanation, code auditing, and string extraction. Three tools accepted into the Kali Linux 2026.2 distribution by the Kali maintainer (g0tmi1k); 8 additional contributions accepted upstream across MISP Galaxy, security resource collections, and Kali packaging.

RESEARCH & PUBLICATIONS

- From Log to Report: Using AdversaryGraph to Turn Firewall and EDR Noise Into a CTI Investigation — AI log analysis, IOC extraction, Tier 1/2/3 investigation, relationship graph review, and report generation. Jun 2026
- MuddyWater / Seedworm / Mango Sandstorm — ATT&CK-mapped kill chain, infrastructure pivot, detection candidates. Mar 2026
- Infrastructure Pivoting: IOC to Actor Network — Passive DNS, reverse IP, ASN reuse, TLS cert, WHOIS field manual. Mar 2026
- ATT&CK as a Working Tool — Gap analysis, Sigma mapping, adversary emulation beyond compliance. Mar 2026

CERTIFICATIONS, EARLIER CAREER & LANGUAGES

- ICU Paramedic — Magen David Adom (2011–2016).
- **Languages:** Russian — native · Hebrew — bilingual · English — professional working proficiency.
